

Agama - Traction Update

Agama is the yield layer for real-world assets onchain. Tokenised treasuries, commodities and equities are arriving onchain at pace, and once they land they do nothing. We build the products that make them productive: a vault where stablecoin deposits earn a yield backed by senior secured private credit, and a layer that sits on top of any tokenised asset a holder already owns, so they keep the exposure and the position starts earning.

This document sets out our full traction. We are pre-mainnet, with the first vault launching in Q4, but the supply side is signed, the capital is committing, and the ecosystem support is already in place. Agama is backed by the **Stellar Foundation**, and supported by **Arbitrum** and **Robinhood**.

We would like Horizen to be the next of those, and not as a one-off deployment. Confidential positions are what unlock the institutional depositor we are built for, which makes Horizen the natural home for the product that carries that capital. We are looking to launch Agama on Horizen and build there for the long term.

Team Achievements & Recognition

Backed by [Stellar Foundation](#) with \$100K

[\\$4M+ in private credit from signed asset issuers](#) ready to deploy into our vaults.

\$2M+ in LP capital currently in discussions.

Incubated in [PROOF](#), the Starknet Foundation's accelerator

Winner of the [Robinhood Chain Innovation Award](#) at Arbitrum Founder House London

Selected for [Cohort II of the Ethereum Security Subsidy Program](#), backed by the Ethereum Foundation, Chainlink and Nethermind

Selected for the [Vault Accelerator](#) by Lunar Strategy and Turtle Club

Accepted into [Founder School Cohort FS26-2](#), the founder program by [Protocol Labs](#).

Member of the T-REX Builder Program ([ERC-3643](#)).

Active contributor to the [T-Rex Protocol](#) and OnchainID ([ERC-3643](#)) Working Groups.

Advisors

[Ash Manicka](#) - Strategic Advisor: Ex-Robinhood and ex-Meta. Joined Robinhood ahead of its IPO and helped lead go-to-market for its most significant crypto initiatives, including Robinhood Wallet. He advises Agama on positioning, distribution, and how retail-facing financial products actually get adopted at scale.

Strategic Partnerships

[Qiro Finance](#) - Underwriting Partnership: Qiro's ZK-verifiable underwriting network powers the institutional-grade credit assessment layer behind every RWA asset integrated into Agama's vaults. We're also co-building a dedicated Agama × Qiro yield pool.

[Bond Credit](#) - Watchtower Agent Integration: Partnership signed to integrate Bond Credit's Watchtower agent into Agama's liquidation stack, real-time monitoring and triggering on collateral health, agent-driven execution.

[Fatra Labs](#) - Private Credit Partnership: Signed MOU to integrate Fatra Labs' tokenized private credit positions as a core asset class inside Agama's vaults. First batches ready to onboard as soon as our first vault goes live.

[Octarine Finance](#) - Integration Partnership: Signed integration partnership, a joint Agama × Octarine deployment is planned once both protocols are live.

In Progress - Distribution

[DeFindex](#): We are in active discussions for Agama to become a yield source inside their protocol. Nothing is signed yet, but the fit is direct: DeFindex needs underwritten, real-economy yield to route capital into, and that is exactly what our curated private credit vaults produce. If it converts, Agama's yield becomes accessible to their users without them ever interacting with our front-end, the fastest distribution path available to us.

[Merkl](#): We are in discussions with Merkl, the incentive distribution protocol, to run campaigns on Agama vaults at launch. Nothing is signed yet. Merkl is the standard rail for routing incentives to depositors across ecosystems, and it plugs directly into the part we care about most: converting a live vault into real TVL.

Launch Programs

[Rayls - Launch Partner Program](#): Agama is part of the Rayls Launch Partner Program alongside category-defining protocols: LayerZero, Lagoon, Obligate, Tether, Enzyme, and others. Contract signed - public announcement coming soon.

[PROOF - Starknet Foundation](#): Agama is incubated in PROOF, the Starknet Foundation's accelerator, with a weekly check-in cadence with the Foundation's growth team and a grant process under review.

[Vault Accelerator by Lunar Strategy and Turtle Club](#): A program focused specifically on vault distribution and LP acquisition, the exact bottleneck between a working vault and real TVL.

RWA Asset Issuer Pipeline

3 MOUs signed with private credit asset issuers:

- Qiro Finance - underwriting + co-built yield pool
- Fatra Labs: [Announcement link](#)
- 1 additional MOUs (*private, public disclosure forthcoming*)
- + **2 additional asset issuers with \$4M in private credit ready to sign** as soon as our first vault goes live.

Total committed originator pipeline: [\\$4M+ in private credit, scaling rapidly](#)

Here are the three signed MOUs with the asset issuers ready to be deployed:

- **Qiro Finance:** [here](#)
- **Fatra Labs:** [here](#)
- **Third asset issuer:** MOU signed. We are under NDA with this counterparty, so the document is shared in the private review thread between Horizen and Agama rather than here.

LP Pipeline

Active discussions with LPs across three segments:

- **High Net Worth Individuals (HNWI)**
- **Family Offices**
- **DeFi protocols - liquidity routing into Agama vaults**
- **Crypto-native and TradFi VCs**

Total LP pipeline in discussion: \$2M+

We have a **signed LOI with a DeFi protocol** to route between **\$50K and \$200K** of their liquidity into an Agama vault at launch. The LOI is available [here](#).

What's Next

- Public disclosure of remaining MOUs and additional asset issuer onboardings
- Continued LP commitments, with the first institutional anchor closing pre-mainnet
- **Mainnet launch Q4 2026**
- **Pre-seed round now open**, with discussions underway
- **First vault on Horizen** targeting a few hundred thousand in TVL at launch, scaling from there
